

PRODUCT REQUIREMENTS DOCUMENT (PRD)

Project Title

Advanced Restaurant Table Reservation System

Product Overview

A web-based platform inspired by TheFork, Yelp, Quandoo, and Eatigo allowing users to search, view, and reserve restaurant tables with filters, maps, and media integration.

Core Features

Login system, locked search bar across pages, video-based homepage, cuisine-based browsing, filters (reviews & price), discounts, map integration, slot-based booking.

Customer Features

Homepage video, search restaurants, view cuisines, recommendations based on time/weather, filter restaurants, view restaurant details with map, check opening/closing hours, view menu, book table with guest count, payment system.

Owner Features

Login dashboard, view table status, upload restaurant photos, add/update menu items.

Booking System

Date, time, and slot-based reservation system with availability check and per-guest pricing.

Payment System

Supports UPI, cards, and confirmation system.

Scope

Includes booking, filtering, media display, and management system. Excludes real payment gateway integration.

Success Criteria

Smooth booking flow, no duplicate slots, responsive UI, accurate filtering and search.
